Cloud Security | Networking | Governance | Infrastructure | DevOps | Automation

Senior Cloud Security and Infrastructure Engineer with 12+ years architecting, securing, and automating enterprise-scale multi-cloud environments on AWS (expert), Azure, and OCI. Proven track record designing DMZ perimeter architecture, multi-account governance frameworks, and everything-as-code CI/CD pipelines — at SAP Concur across 8+ global production environments and at Nintendo of America across 100+ AWS accounts and 20+ Azure subscriptions. Known for delivering at scale: Gateway Load Balancer-fronted DMZ re-architectures, OpenTofu firewall fleet migrations, FIPS-validated FedRAMP designs, and policy-as-code compliance automation for PCI DSS, SOC 2, and SOX. Always building. Always automating.

EXPERIENCE

SAP (Concur)

May 2021 – Present

Senior Cloud Security & Infrastructure Engineer · Bellevue, WA

- Designed and led DMZ 2.0 — a multi-region Gateway Load Balancer-fronted FortiGate re-architecture replacing the legacy AWS perimeter across all commercial environments spanning US, EU, and Asia-Pacific regions; architecture-review-board approved February 2023, final cutover August 2025.
- Obtained five-board governance approval (architecture review, change advisory, security review, FIPS review, SDLC pen-test) for centralized FortiManager including a FIPS 140-validated design for the FedRAMP environment; onboarded all seven environments in under six months; holds active HSPD-12 Public Trust (T2).
- Led OpenTofu migration for the FortiGate fleet — bootstrapped a greenfield OpenTofu deployment repository, authored 100+ pull requests migrating from CloudFormation/Ansible to declarative IaC; first production cutover (FortiOS 7.4.11) completed May 2026.
- Primary owner of an Ansible-based firewall configuration pipeline managing the entire FortiGate fleet; executed continuous FortiOS upgrades 6.4 through 7.6, certificate lifecycle automation, password rotation, and IMDSv2 compliance hardening.
- Closed 1,000+ vulnerability tickets (Tenable, AWS Inspector, Cloud Custodian, Orca, FIM, SIEM) across all environments — over half of all assigned work over five years.
- Implemented IPv6 dual-stack across commercial and FedRAMP environments spanning 100+ tracked tickets; re-executed the full FedRAMP rollout after the initial implementation required revision.
- Authored an internal network-operations Claude Code plugin (11 skills) and manage the team's internal skills plugin repository — encoding five years of operational knowledge into agentic automation for vulnerability reporting, FortiGate health checks, change-request drafting, and team review.
- Built and operate local LLM infrastructure on containerized and dedicated hardware — supporting long-running research jobs, web-triggered automation, cron-scheduled pipelines, and CI/CD-integrated LLM workflows; deployed a FortiAI proof-of-concept into a production environment via FortiManager.
- Built everything-as-code CI/CD platform (GitHub Enterprise + AWS CodeBuild/CodePipeline) for PR-gated deployment of AWS infrastructure and FortiGate security configurations across 8+ global production environments; 800+ PRs authored and 800+ reviewed over five years.
- Enforced PCI DSS, SOC 2, and SOX compliance using Cloud Custodian, AWS Config Rules, and SCPs; directly supported US and Japan audit and remediation cycles.
- Automated secrets and certificate lifecycle (HashiCorp Vault PKI, AppRole, OIDC) eliminating manual rotation toil across the firewall and infrastructure fleet.
- Operated full observability stack — Splunk (12+ years), CloudWatch, Prometheus, Grafana, GuardDuty — dashboards, anomaly detection, and automated triage runbooks across all environments.
- Senior technical lead on global team of 20+; mentored engineers through architecture decisions and code review; contributed to annual roadmap and budget planning.

Nintendo of America

Oct 2018 – May 2021

Senior Cloud Engineer — Platform Security & Governance · Redmond, WA

- Architected and managed 100+ AWS accounts and 20+ Azure subscriptions (plus OCI) from the ground up — defining account structure, security baselines, cost allocation, and network topology in partnership with business units across the organization.
- Built structured AWS Organization using Control Tower and custom CDK/Python account vending automation, enforcing security posture and compliance from day one for every new account.
- Designed hub-spoke AWS VPC and Azure VNET architecture with Palo Alto firewalls; delivered CloudFront CDN, Route53 DNS governance, WAF integration, and least-privilege IAM frameworks.
- Deployed GuardDuty, Cloud Custodian policy-as-code, and Azure Policy to automate governance controls and generate audit evidence organization-wide.
- Built all platform automation via GitHub Enterprise CI/CD using AWS CDK, CloudFormation, and Python; authored operational runbooks and architecture diagrams.
- Accelerated cloud adoption for game development teams through solutions architecture, proofs-of-concept, and office hours from design through production delivery.

Puget Sound Energy

Nov 2017 – Oct 2018

Senior Systems Engineer · Redmond, WA

- Operated large-scale VMware ESXi environment on UCS hardware; automated datacenter server migration of thousands of VMs using PowerShell and GitLab.

Univar Inc.

Dec 2015 – Nov 2017

Senior Platform Engineer · Redmond, WA

- Founded Cloud and Automation team for Fortune 500 company; designed Univar's AWS presence including DirectConnect for MPLS connectivity; implemented CloudFormation IaC and infrastructure automation using Ansible, Chef, and Python.

Vix Technology

Aug 2015 – Dec 2015

System Operations Lead · Seattle, WA

- Led team of six engineers across three US regions; operated fare payment systems for government transit authorities.

ChemPoint Inc.

Apr 2014 – Aug 2015

Infrastructure Engineer · Bellevue, WA

- System administration and monitoring for multinational organization; led IT engineering projects including MPLS network implementation and call center upgrades.

MINDBODY

Oct 2012 – Apr 2014

Sr. Site Reliability Engineer · San Luis Obispo, CA

- Automated and managed deployments; provided SRE mentoring.

Digital West Networks, Inc.

Dec 2011 – Oct 2012

NOC Technician · San Luis Obispo County, CA

- Delivered customer-facing NOC support for Digital West customers, escalating to Engineering when needed.
- Performed data center administration and operations — remote-hands, cable terminating/pulling/planning, and power management.
- Leveraged Linux systems administration to support hosted services including email and web hosting.

EDUCATION

Cuesta College — Computer Science 2010–2012
